

Integrated Technology Systems, LLC

Handheld Thermal Imaging System

A Tool Specifically Designed for Law Enforcement

Integrated Technology Systems has developed an exciting new Law Enforcement product to enhance officer safety and increase criminal apprehension. Current conditions require most agencies to utilize Fire Departments' thermal products which are not designed for law enforcement needs. This results in loss of time allowing criminals to avoid capture.

ThugFindIR® is an indispensable tool when utilized for searches, foot pursuit, surveillance, K9 tracking and locating missing persons.
